

Education

RMIT University 2020 - 2024
Bachelor of Design - Digital Media

PCAP 2023 - 2023
Certified in Python Programming

Core Skills

Engines & Rendering

Unreal Engine (Lighting, Sequencer,
Editor Utility Widgets, Pruduction Tools)

Unity (Rendering, Android pipeline)

Pipeline & Systems

CI/CD & Deployment (Ansible, WSL)

Version Control: Perforce (server setup,
workflows), Git

Windows Server (AD, DNS, GPO), Linux
Server Management

Programming & Tools

Python (DCC tools, pipeline automation,
backend systems)

C++ (Unreal Engine tooling, plugin-level
development)

JavaScript (Web applications, internal
tools UI, front-end interfaces)

Production

Asset management systems

Cross-DCC workflows (Maya, 3ds Max,
Blender, and Houdini)

Technical documentation, onboarding,
and user training

Curriculum Vitae

SONNY NGUYEN

Pipeline Technical Director

Infrastructure engineer and pipeline TD with full-stack ownership of a 70-person AAA outsource studio. Built and maintain the **Helix Core** server, **Windows Server** domain, **Ansible** deployment system, and on-prem services, alongside **Unreal Engine** and cross-DCC **Python tooling** shipped across Milestone titles including Ride 6, MotoGP25, and Screamer.

Working Experience

Pipeline Technical Director

2026-Present

Glenda Studio - Ho Chi Minh city

Own the studio's on-prem service stack end to end: two Ubuntu servers (production and dev/test) running a customized Frappe deployment for HRMS and project management and a forked Element-web for internal communications, with nginx reverse proxy, proper domain configuration, and dual-LAN supporting both offline internal and internet-facing access. Responsible for monitoring, backup, incident response, and long-term maintainability across Helix Core, Frappe, Element, the domain controller, and the deployment system.

Lead a 3-person IT team, owning their work allocation, technical mentorship, progression, and the documentation and runbooks that let them operate independently on day-to-day systems work. Act as the studio's primary technical voice in cross-functional planning with producers, department leads, and directors, and represent the technical side in client-facing meetings covering pipeline, delivery, and infrastructure topics. Continue to develop pipeline tooling across Unreal Engine and DCC applications (Maya, 3ds Max, Blender) in support of active productions, and serve as architectural reviewer for all internal systems.

Technical Artist

2025-2026

Glenda Studio - Ho Chi Minh city

Deployed and configured Helix Core (Perforce) for version control and a Windows Server Domain Controller for workstation provisioning and user policy, establishing the foundation for multi-project Unreal Engine collaboration across the studio. Built a studio-wide deployment and automation system using Ansible on WSL (~50 playbooks) and PDQ Deploy, covering tool distribution, software updates, system monitoring, and workstation configuration.

Developed pipeline tooling across Unreal Engine and DCC applications, including Editor Utility Widgets for asset validation, import standardization, and naming convention enforcement, plus cross-DCC Python toolsets for Maya, 3ds Max, and Blender covering asset export, review, and transfer workflows. Built an Asset Delivery System on top of the Perforce Python API for controlled P4-to-P4 asset transfer between project depots, and designed an offline asset management system modeled after Quixel Bridge for internet-independent asset ingestion.

3D/VFX Artist

2024 - 2025

CG Record Studio - Ho Chi Minh city

Worked on large-scale archviz and commercial projects using Houdini-driven procedural workflows for city layouts, terrain, buildings, and asset scattering, integrated into Unreal Engine for real-time visualization.

Contributed to interior walkthroughs and large environment renders while exploring Houdini-Unreal workflows to prototype reusable environment tools, gaining hands-on experience with real-time rendering constraints and optimization.

Lighting Artist

2022 - 2023

Sparx Virtuos Studio - Ho Chi Minh city

Contributed to cinematic lighting and look development using Unreal Engine and internal real-time tools, focusing on lighting setup, exposure control, and visual consistency for cinematic sequences.

Collaborated closely with artists and production teams in large, structured environments, gaining experience working across multiple disciplines. Contributed to AAA projects, including Marvel's Spider-Man 2 (Insomniac Games).
