

Education

RMIT University 2020 - 2024
Bachelor of Design - Digital Media

PCAP 2022 - 2023
Certified in Python Programming

Core Skills

Engines & Rendering

Unreal Engine (Lighting, Sequencer, Editor Utility Widgets, Pruduction Tools)

Unity (Rendering, Android pipeline)

Pipeline & Systems

CI/CD & Deployment (Ansible, WSL)

Version Control: Perforce (server setup, workflows), Git

Windows Server (AD, DNS, GPO), Linux Server Management

Programming & Tools

Python (DCC tools, pipeline automation, backend systems)

C++ (Unreal Engine tooling, plugin-level development)

JavaScript (Web applications, internal tools UI, front-end interfaces)

Production

Asset management systems

Cross-DCC workflows (Maya, 3ds Max, Blender, and Houdini)

Technical documentation, onboarding, and user training

Curriculum Vitae

SONNY NGUYEN

Technical Artist (Pipeline & System Focus)

Technical Artist with 3+ years of production experience spanning Unreal Engine lighting and rendering, procedural environment workflows, and end-to-end pipeline and system ownership.

Specialized in studio-wide deployment and CI/CD automation, Unreal Engine tooling, version control infrastructure, and Python-based workflow optimization across multiple DCCs.

Currently operating as the primary technical owner within a production studio, responsible for maintaining pipelines, servers, and internal systems while collaborating closely with artists, production, and management.

Working Experience

Technical Artist 2025-Present
Glenda Studio - Ho Chi Minh city

Architected and operated a studio-wide deployment and CI/CD system using WSL and Ansible, automating tool distribution, updates, system monitoring, and workstation configuration across all artists. Introduced and deployed Perforce for internal use, including server setup, permission models, workflow design, and documentation, establishing the foundation for Unreal Engine project pipelines and asset collaboration.

Developed Unreal Engine Editor Utility Widgets to automate asset validation, standardize asset import rules, and enforce hierarchy and naming conventions across multiple projects. Built cross-DCC Python toolsets for Maya, 3ds Max, and Blender to automate repetitive asset workflows such as exporting, reviewing, and asset transfer, improving production efficiency and consistency. Designed an offline asset management system inspired by Quixel Bridge to support controlled asset ingestion without internet dependency.

Solely managed and customized internal HR and project management web applications using the Frappe framework, collaborating with HR and production teams to deliver new features and maintain system reliability. Acted as the primary technical decision-maker and reviewer for internal tools and systems, ensuring code quality, stability, and long-term maintainability, and provided technical documentation and user manuals to support onboarding and long-term adoption.

3D/VFX Artist 2024 - 2025
CG Record Studio - Ho Chi Minh city

Worked on large-scale archviz and commercial projects using Houdini-driven procedural workflows for city layouts, terrain, buildings, and asset scattering, integrated into Unreal Engine for real-time visualization.

Contributed to interior walkthroughs and large environment renders while exploring Houdini-Unreal workflows to prototype reusable environment tools, gaining hands-on experience with real-time rendering constraints and optimization.

Lighting Artist 2022 - 2023
Sparx Virtuos Studio - Ho Chi Minh city

Contributed to cinematic lighting and look development using Unreal Engine and internal real-time tools, focusing on lighting setup, exposure control, and visual consistency for cinematic sequences.

Collaborated closely with artists and production teams in large, structured environments, gaining experience working across multiple disciplines. Contributed to AAA projects, including Marvel's Spider-Man 2 (Insomniac Games).

Additional Experience

School Project

Interactive VR game in Unreal (real-time interaction, performance considerations)

AI Gen

Image generation workflow integration using ComfyUI for visual development
